

Instruction manual

Consumption counter VA 520

for bi-directional measurements

Stationary

Flow and consumption measurement for compressed air and gases

I. Foreword

Dear customer,

thank you very much for deciding in favour of the VA 520. Please read this installation and operation manual carefully before mounting and initiating the device and follow our advice. A riskless operation and a correct functioning of the VA 520 are only guaranteed in case of careful observation of the described instructions and notes

1 Intended use

The VA 520 consumption sensor for bi-directional measurements is used for continuous flow measurement in both directions.

The VA 520 consumption sensor for bi-directional measurements is designed and constructed exclusively for the intended purpose described here and may only be used accordingly.

The user must check whether the instrument is suitable for the selected application. It must be ensured that the medium is compatible with the wetted parts. The technical data listed in the data sheet are binding.

Improper handling or operation outside the technical specifications is not permitted. Claims of any kind based on improper use are excluded.

Operating principle:

The VA 520 consumption probe operates according to the calorimetric measuring method.

The basis of this measuring method is the electrical heating of the mechanically protected built-in sensor. The mass flow, the volume flow and the flow velocity can be measured and determined by the resulting heat flow to the passing medium (gas).

With the calorimetric measurement method (based on the measurement principle), the operating temperature and pressure of the medium have no influence on the measurement result, only the material data of the gas component are decisive.

The integrated flow direction recognition allows the bi-directional flow measurement with display of the flow values. The flow direction is indicated by arrows in blue and green.

A meter reading is available for each flow direction, displayed in the colours blue and green according to flow direction.

2 Instruments description

The VA 520 is a compact consumption counter for compressed air and gases.

Special features:

- Optimum accuracy due to compact design
- Integrated Display showing Flow, consumption, velocity and temperature for two directions
- Input inner tube diameter via display keys
- Units free selectable. m³/h, m³/min, l/min, l/s, kg/h, kg/min, kg/s, cfm
- Modbus RTU (RS485) Interface, Ethernet (also PoE) and MBus optional
- 2x Analogoutput 4..20mA
- 2x Pulse output galv. isolated.

CS Instruments Service Software

- Analogoutput 4...20 mA scaleable
- Selection of gas type (Air, Nitrogen, Argon, Nitrous oxide, CO2, Oxygen, Natural gas)
- Read out Service data
- Sensordiagnoses

3 Safety instructions

Read this manual carefully before installing the VA 520. If the instructions given in this manual, in particular the safety instructions, are not observed, this may result in hazards for people, equipment and plants

Please read carefully before starting the device!

Warning: Do not exceed the pressure range of 16 bar!

Observe the measuring range of the sensor!

The screwed fixture must be pressure tight.

It is absolutely necessary to avoid condensation on the sensor element or water drops in the measuring air as they may cause faulty measuring results.

The manufacturer cannot be held liable for any damage which occurs as a result of non-observance or non-compliance with these instructions. Should the device be tampered with in any manner other than a procedure which is described and specified in the manual, the warranty is cancelled and the manufacturer is exempt from liability.

The device is destined exclusively for the described application.

We offer no guarantee for the suitability for any other purpose and are not liable for errors which may have slipped into this operation manual. We are also not liable for consequential damage resulting from the delivery, capability or use of this device.

We offer you to take back the instruments of the instruments family VA 520 which you would like to dispose of.

Qualified employees from the measurement and control technology branch should only carry out adjustments and calibrations.

Flammable gases

If this consumption sensor is used for measurement of flammable gases (e. g. natural gas and so on) we expressly would like to point out that the sensor has no DVGW admission, however, it can be used for measurements in natural gas. A DVGW admission is not mandatory.

The consumption sensor corresponds with the current state of technology and basically it can be used in any flammable and non-flammable gases.

If the sensor is used e.g. in the medium natural gas, the sensor will be adjusted for natural gas. The calibration protocol (inspection certificate) will be included in the scope of delivery.

The area outside the pipeline (ambient area of the sensor) must not be an explosive area.

The installation has to be carried out by authorized professionals.

4 Technical data

Measurement:	Flow and consumption
Reference Standard:	Standard settings ex works: DIN 1945, ISO 1217 at 20°C and 1000 mbar
Selectable Units	m³/h (Standard settings ex works) m ³ /min, l/min, l/s, ft/min, cfm, m/s, kg/h, kg/min, kg/s, °C, °F
Measuring principle:	calorimetric measurement
Sensor:	Pt45, Pt1000
Measuring medium:	Air, gases
Operating temperature:	-30 ... 80°C probe tube -20 ... 70°C housing
Operating pressure:	up to 16 bar, special version PN 40 (40 bar)
Power supply:	18 to 36 VDC
Power consumption:	max. 5W
Digital output:	RS 485 (Modbus RTU) Optional Ethernet (also PoE) and MBus
Analog output:	4...20 mA (see chapter 4), max. burden < 500 Ohm
Pulse output:	pulse outputs potential free (dry contact) passive: max. 48Vdc, 150mA 1 pulse pro m ³ resp. pro l, Valency adjustable with the display keys
Accuracy:	± 1,5 % m.v., ± 0,3 % f. s.*
Display:	TFT 1.8 Resolution 220 x 176
Mounting thread:	R 1/4", R1/2", R3/4", R1", R 1 1/4" R1 1/2", R 2" DIN EN 10226 (ISO 7-1)
Material:	Stainless steel 1.4301 / 1.4404 Version with flange DIN EN 1092-1: Stainless steel 1.4404
Protection class:	IP65

* m.v. = measured values
f.s. = full scale

5 Scaling Analogue output Comprssed Air

Reference DIN1945/ ISO 1217: 20°C, 1000 mbar (Reference during calibration)

Description	Version	Analogue output	
VA 520 with integrated 1/4" meas. section	Low Speed	4... 20 mA =	0...25 l/min
	Standard		0...50 l/min
	Max		0...105 l/min
	High Speed		0...130 l/min
VA 520 with integrated 1/2" meas. section	Low Speed	4... 20 mA =	0...20 m ³ /h
	Standard		0...45 m ³ /h
	Max		0...90 m ³ /h
	High Speed		0...110 m ³ /h
VA 520 with integrated 3/4" meas. section	Low Speed	4... 20 mA =	0...45 m ³ /h
	Standard		0...85 m ³ /h
	Max		0...175 m ³ /h
	High Speed		0...215 m ³ /h
VA 520 with integrated 1" meas. section	Low Speed	4... 20 mA =	0...75 m ³ /h
	Standard		0...145 m ³ /h
	Max		0...290 m ³ /h
	High Speed		0...355 m ³ /h
VA 520 with integrated 1 1/4" meas. section	Low Speed	4... 20 mA =	0...140 m ³ /h
	Standard		0...265 m ³ /h
	Max		0...530 m ³ /h
	High Speed		0...640 m ³ /h
VA 520 with integrated 1 1/2" meas. section	Low Speed	4... 20 mA =	0...195 m ³ /h
	Standard		0...365 m ³ /h
	Max		0...730 m ³ /h
	High Speed		0...885 m ³ /h
VA 520 with integrated 2" meas. section	Low Speed	4... 20 mA =	0...320 m ³ /h
	Standard		0...600 m ³ /h
	Max		0...1195 m ³ /h
	High Speed		0...1450 m ³ /h
VA 520 with integrated 2 1/2" meas. section	Low Speed	4... 20 mA =	0...550 m ³ /h
	Standard		0...1025 m ³ /h
	Max		0...2050 m ³ /h
	High Speed		0...2480 m ³ /h
VA 520 with integrated 3" meas. section	Low Speed	4... 20 mA =	0...765 m ³ /h
	Standard		0...1420 m ³ /h
	Max		0...2840 m ³ /h
	High Speed		0...3440 m ³ /h

6 Installation Description

6.1 Pipe/tube requirements

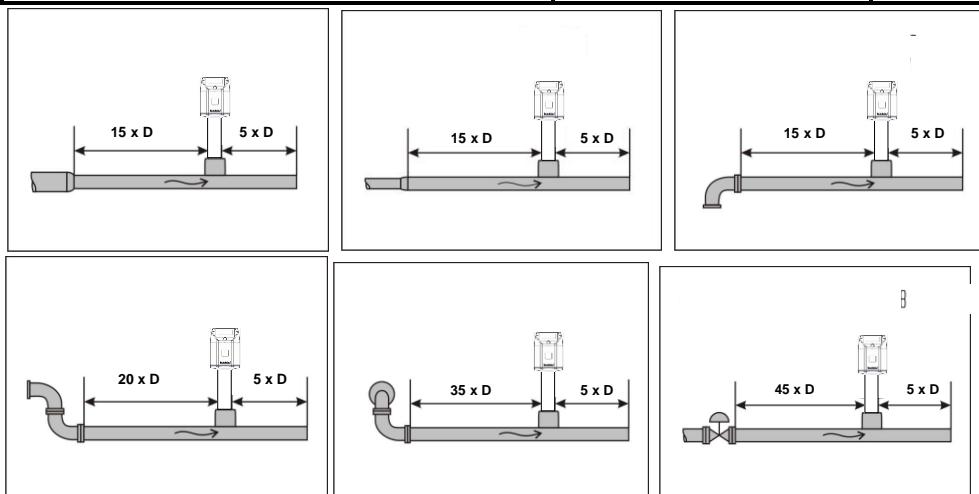

- Correctly sized gaskets
- Correct aligned flanges and gaskets
- Diameter mismatch at the pipe junctions should be avoided but must be less than 1mm. For further information see ISO 14511
- Ensure clean pipes after installation

6.2 Inlet / outlet runs

The principle of thermal Mass flow measurement is very sensitive against disturbances. Therefore, it is necessary to ensure the recommended inlet and outlet runs.

Table of additionally required inlet sections

Flow obstruction in front of the measuring section	Minimum length inlet section (L1)	Minimum length outlet section (L2)
Slight curve (bend < 90°)	12 x D	5 x D
Reduction (pipe narrows towards the meas. section)	15 x D	5 x D
Expansion (pipe expands towards the meas. section)	15 x D	5 x D
90° bend or T-piece	15 x D	5 x D
2 bends á 90° on one level	20 x D	5 x D
2 bends á 90° 3-dimensional change of direction	35 x D	5 x D
Shut-off valve	45 x D	5 x D

The respective minimum values required are indicated here. If it is not possible to observe the stipulated equalising sections, considerable deviations in the measuring results must be expected.

Attention:

The dimensions of the VA 520 consumption counter measuring sections do not fulfill the required minimum lengths of the input and outlet runs.

Please ensure recommended in - and outlet distances, dimensions for measuring sections see page 12 and 13.

6.3 Installation of VA 520

The sensor VA 520 is pre-supplied with the measuring section.

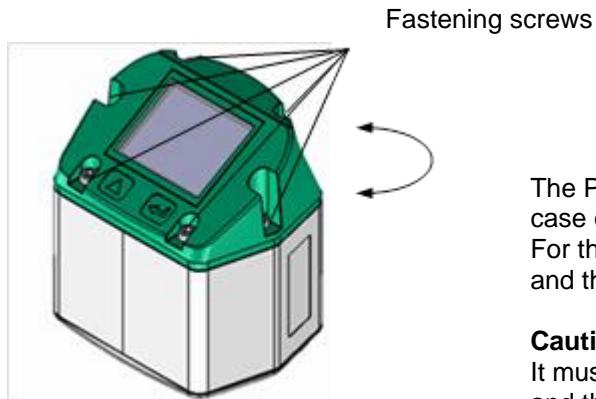

An installation at customer site is only allowed in the unpressurized state of the system

The connecting nut is tightened to a torque of 25 -30 Nm.

Tightness of the connection must be checked and ensured.

6.4 Displayhead Position

The Position of the Displayhead is twistable by 180 e.g. in case of reverse flow direction.

For this purpose the 6 fastening screws are to be released and the displayhead rotated 180°.

Caution:

It must be ensured that the connection plugs are still plugged and the gasket is installed correctly.

7 Flow measuring ranges

7.1 Flow for different gases

Legend:

-VB	Negative supply voltage 0 V	Pulse	Pulse for consumption
+VB	Positive supply voltage 18...36 VDC smoothed	NC	Must not be connected to a voltage and/or to protection earth. Please cut and isolate cables.
I ₊	Current signal 4...20 mA – selected measured signal		
RS 485 (A) RS 485 (B)	Modbus RTU A / Modbus RTU (+) Modbus RTU B / Modbus RTU (-)	MBus	MBus (reverse polarity protected)

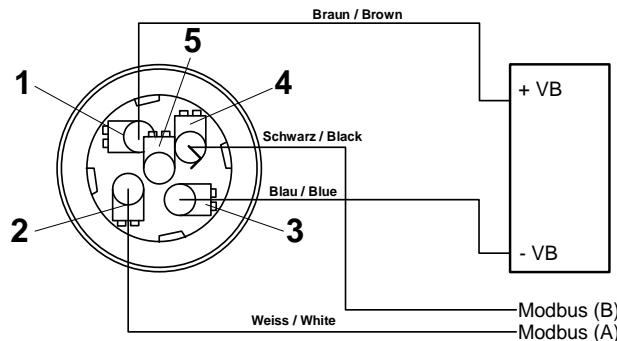

If no connection cable/ pulse cable is ordered the sensor will be supplied with a M12 connector plug. The user can connect the supply and signal cables as indicated in the connection diagram.

9.2 Connection diagrams

9.2.1 Modbus

Connector plug A (M12 - A-coding)

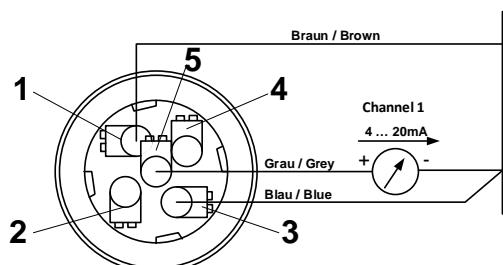

Remark: If the sensor is placed at the end of the Modbus system a termination is required. The sensors have an internal switchable termination, therefore the 6 fastening screws from the lid are to be released and set the internal DIP Switch to "On". It must be ensured that the connection plugs are still plugged and the gasket is installed correctly.

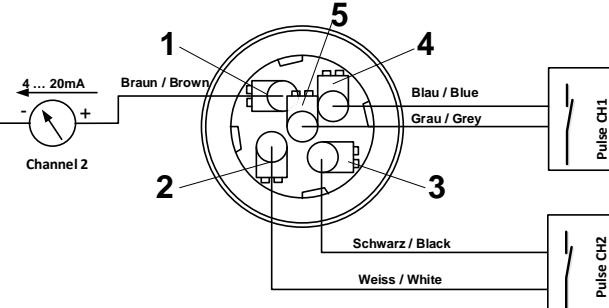

Alternatively, a 120R resistor can be installed in the plug between pin 2 and pin 4.

9.2.2 Analogue output (4-20mA, Pulse)

Connector plug A (M12 A-coding)

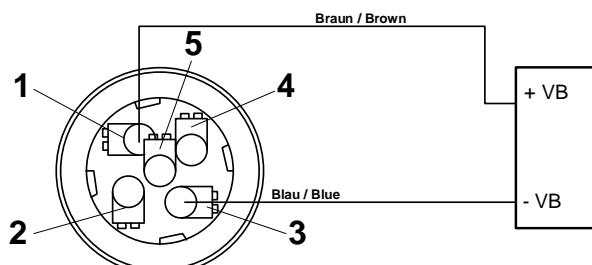

Connector plug B (M12 A-coding)

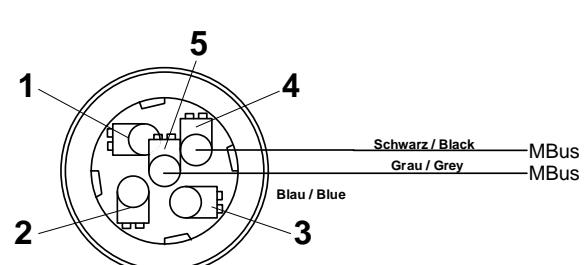

9.2.3 MBus

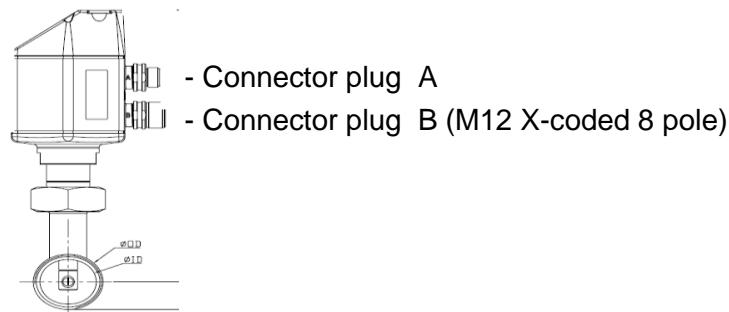

Connector plug A (M12 A-coding)

Connector plug B (M12 A-coding)

9.2.4 Ethernet (optional PoE)

Connector plug B

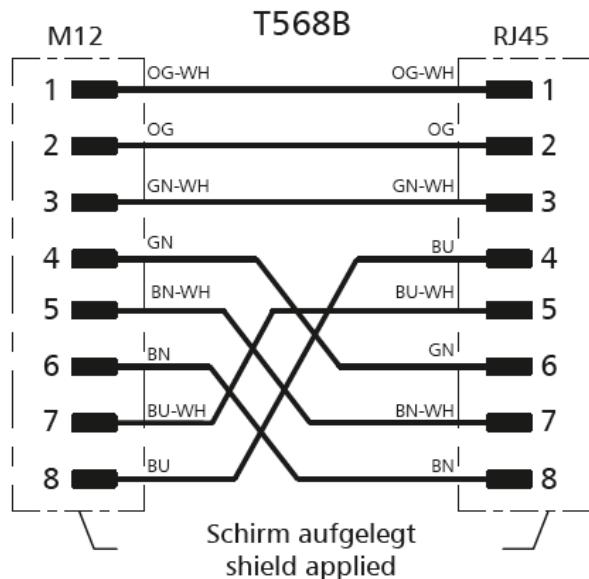

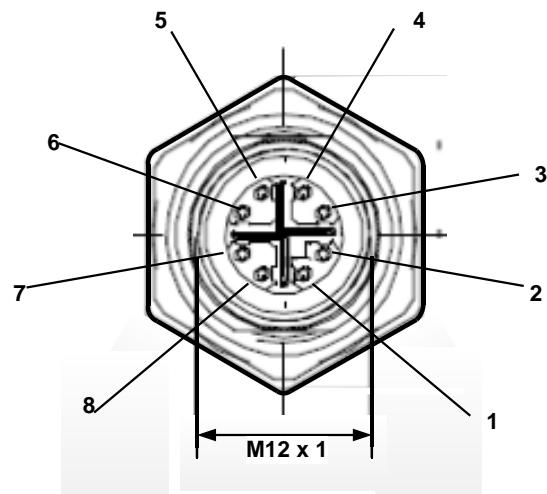

M12 x-coded 8 pole

Data LINES: 1,2 und 3,4

PoE LINES: 5,6 und 7,8

Connection cable

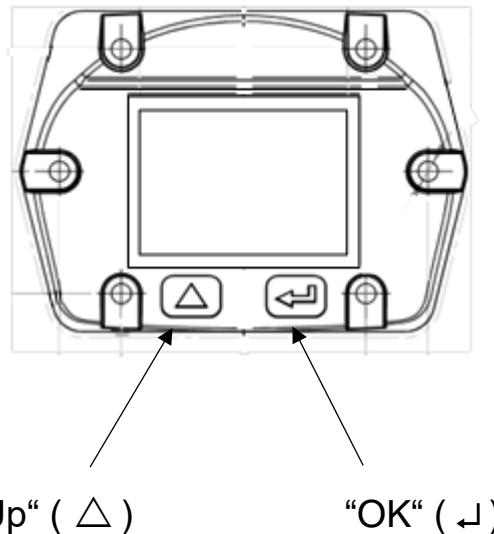

M12 x-coded to RJ45

Connection cable: Cat 6.

*PoE: Power over Ethernet

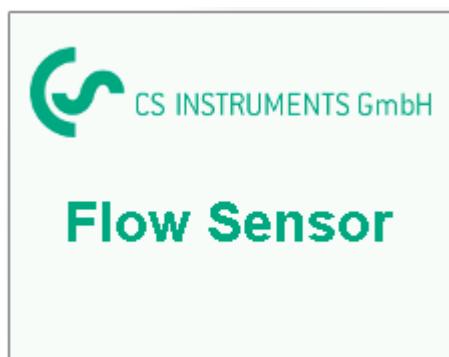

10 Operation

The operation of the VA 520 is done by the two capacitive key buttons Up (\triangle) and Enter (\leftarrow)

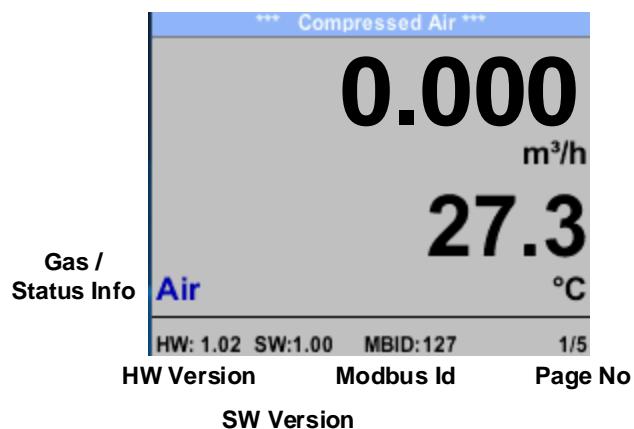

10.1 Initialization

After switching on the VA 520, the initialized screen is displayed followed by the main menu.

10.2 Main menu

Switching to pages 2-5 or back by pressing key „△“

Counter Direction green

Counter direction blue

Total counter

Actual flow

*** Average Min Max ***			
Flow: m ³ /h	AV	Min	Max
395.38		0	
207.45		870.87

Temperature Medium (actual and min. value)
Temperature Medium (Average and max. value)

AV-Time: 1440 minutes

5/5

AV-Time (Period for average value calculation) could be changed under [Sensor Setup.-Advanced- AV-Time](#)

10.3 Settings

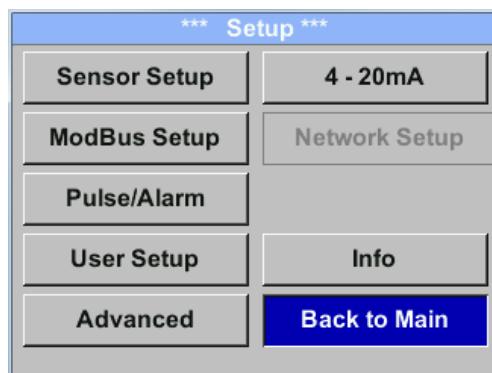

The settings menu could be accessed by pressing the key „OK“.

But the access to the *settings menu* is password protected.

Factory settings for password at the time of delivery: 0000 (4 times zero).

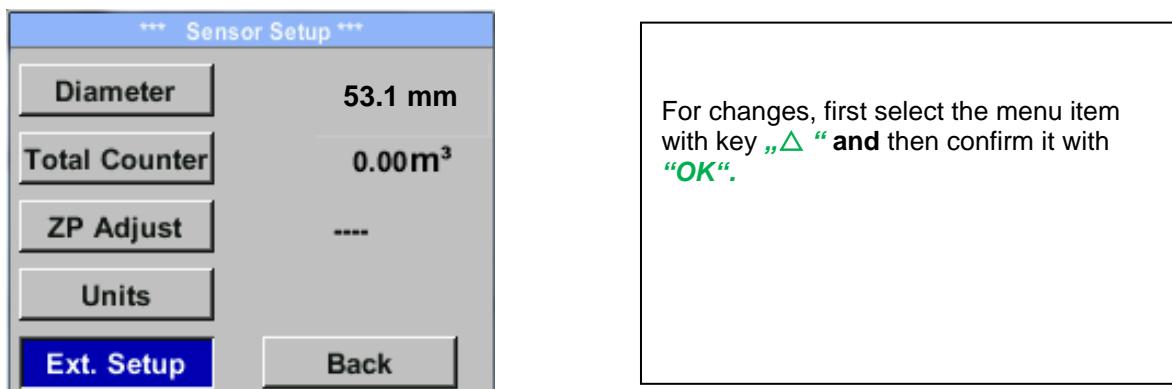

If required the password could be changed at *Setup–User setup–Password*.

Selection of a menu item or to change a value is done with the key „ Δ “, a final move to the chosen menu item or takeover of the value change needs the confirmation by pressing the key „OK“

10.3.1 Sensor Setup

Setup → Sensor Setup

For changes, first select the menu item with key „**△**“ and then confirm it with **“OK”**.

10.3.1.1 Input / change tube diameter

For VA 520 not adjustable (suspended) as voted on included measuring section with corresponding pipe diameter.

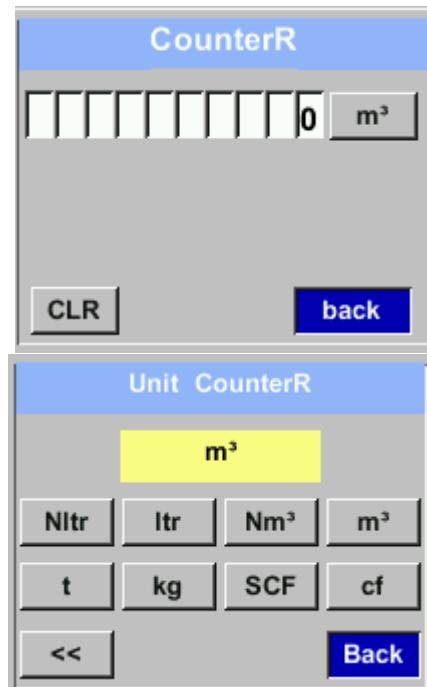

10.3.1.2 Input / change consumption counter

Setup → Sensor Setup → Total Counter

For changing one or both counter please select by pressing key „△“ the corresponding counter-button then confirm it with key “OK”.

Setup → Sensor Setup → Total Counter → Unit button

In order to change, e.g. the unit, first select by pressing key „△“ the button “Unit” and then key “OK”.

Select with the key „△“ the correct unit and then confirm selection by pressing 2x „OK“.

Entering / changing the consumption counter via button „△“, select the respective position and activate the position with the “OK” button.

By pressing „△“ the position value is incremented by 1. Complete with “OK” and activate next number position.

Confirm entry by pressing „OK“.

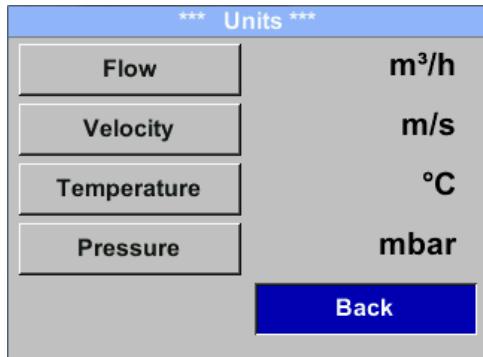

With „CLR“ the counter will be reset to zero

Important!

When the counter reach 100000000 m³ the counter will be reset to zero.

10.3.1.3 Definition of the units for flow, velocity, temperature and pressure

Setup → Sensor Setup → Units

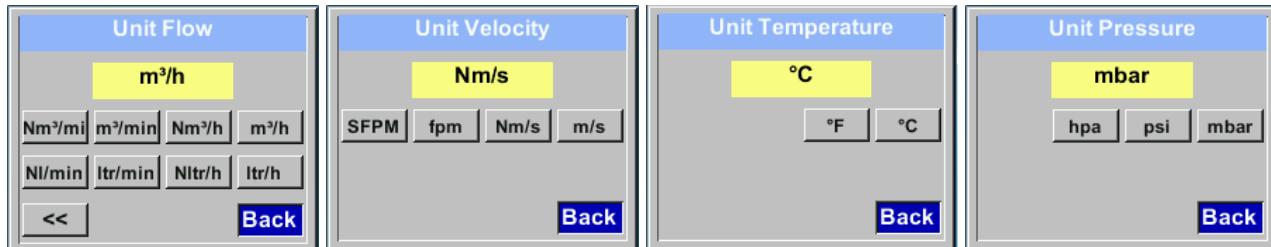

To make changes to the unit for the respective measurement value, first select by pressing „**△**“ the field of the „measurement value“ and activate „it with „**OK**“.

Selection of the new unit with „**△**“

In case the quantity of units selectable are not presentable on one page, please move to next page by pressing „**<<**“.

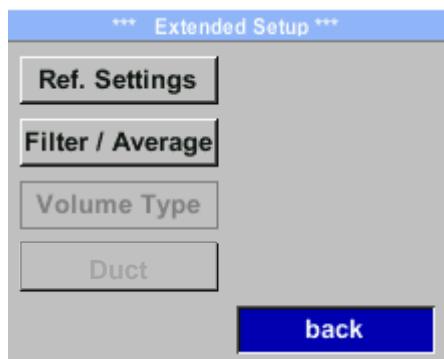

Confirm selection by pressing 2x „**OK**“.

Procedure for all 4 measurement variables is analogous.

10.3.1.4 Advanced settings

Setup → Sensor Setup → Advanced

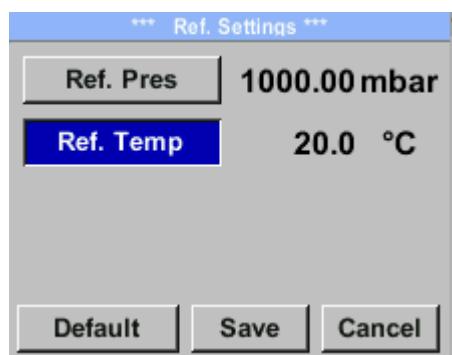

10.3.1.4.1 Definition of the reference conditions

Here can be defined the desired measured media reference conditions for pressure and temperature and times for the filter and averaging.

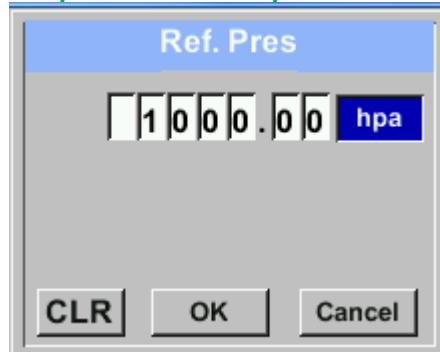

- Factory presetting for reference temperature and reference pressure are 20 °C, 1000 hPa
- All volume flow values (m³/h) and consumption values indicated in the display are related to 20 °C and 1000 hPa (according to ISO 1217 intake condition)
- Alternatively 0 °C and 1013 hPa (=standard cubic meter) can also be entered as a reference.
- **Do not enter the operation pressure or the operation temperature under reference conditions!**

Setup → Sensor Setup → Advanced → Ref. Settings

To make changes, first select a menu with button „△“ and confirm selection by pressing „OK“.

Setup → Sensor Setup → Advanced → Ref. Settings → Ref.Pres

Ref. Pres

1000.00 hpa

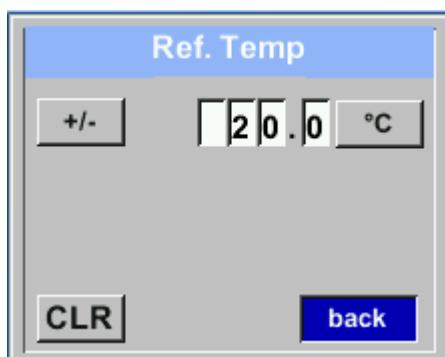

CLR OK Cancel

In order to change, e.g. the unit, first select by pressing key „ Δ “ the field “**Units**” and then key “**OK**”.

Select with the key „ Δ “ the correct unit and then confirm selection by pressing 2x „**OK**“.

Input / change of the value by selecting the respective position with button „ Δ “ and entering by pressing button „**OK**“.

Setup → Sensor Setup → Advanced → Ref. Settings → Ref.Temp

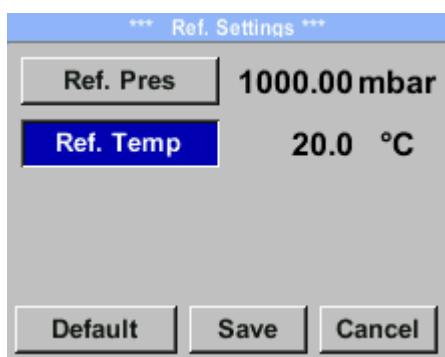

Ref. Temp

+/- 20.0 °C

CLR back

By pressing „ Δ “ the position value is incremented by 1. Complete with “**OK**” and activate next number position.

Procedure for changing the reference temperature is the same.

*** Ref. Settings ***

Ref. Pres 1000.00 mbar

Ref. Temp 20.0 °C

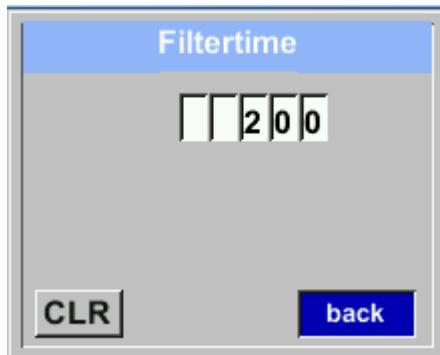

Default Save Cancel

All changes have to be stored by pressing „**Save**“.

With „**Default**“, the sensor is reset to calibration settings.

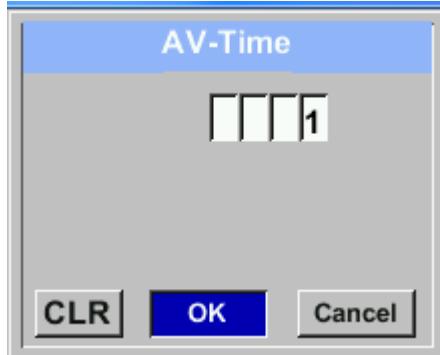

10.3.1.4.2 Time setting for filtering

Setup → Sensor Setup → Advanced → Filtertime

Under item **"Filtertime"** an attenuation can be defined.
Input values of 0 -10000 in [ms] are possible

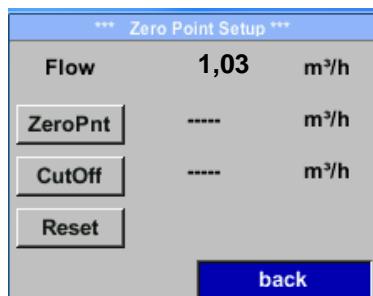

Setup → Sensor Setup → Advanced → AV-Time

The time period for averaging can be entered here.
Input values of -1440 1 [minutes] are possible.
For average values see display window 3 + 4

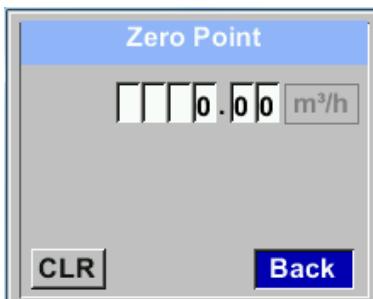

10.3.1.5 Setting of Zeropoint and Low-flow cut off

Setup → Sensor Setup → ZP Adjust

To make changes, first select a menu with button „ Δ “ and confirm selection by pressing „OK“.

Setup → Sensor Setup → ZP Adjust → ZeroPnt

When, without flow, the installed sensor shows already a flow value of > 0 m³/h herewith the zero point of the characteristic could be reset.

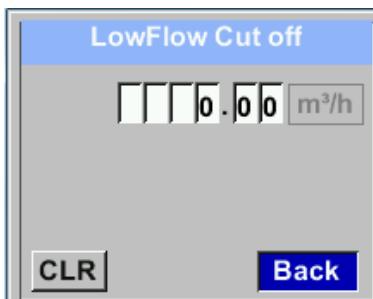

For an input / change of the value select with the button „ Δ “ the respective number position and activate it with „OK“.

By pressing „ Δ “ the position value is incremented by 1. Confirm the input with „OK“ and activate next number position.

Leave menu with button „Back“

CutOff

Setup → Sensor Setup → ZP Adjust →

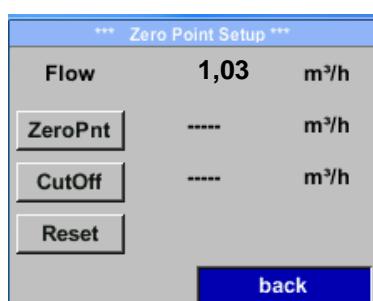

With the low-flow cut off activated, the flow below the defined "LowFlow Cut off" value will be displayed as 0 m³/h and not added to the consumption counter.

For an input / change of the value select with the button „ Δ “ the respective number position and activate it with „OK“.

By pressing „ Δ “ the position value is incremented by 1. Confirm the input with „OK“ and activate next number position.

Leave menu with button „Back“

Setup → Sensor Setup → ZP Adjust → Reset

By selection of „Reset“ all settings for „ZeroPnt“ and „CutOff“ are reset.

Menu item to be select with button „ Δ “ and confirm the reset with „OK“.

Leave menu with button „Back“

10.3.2 Modbus settings

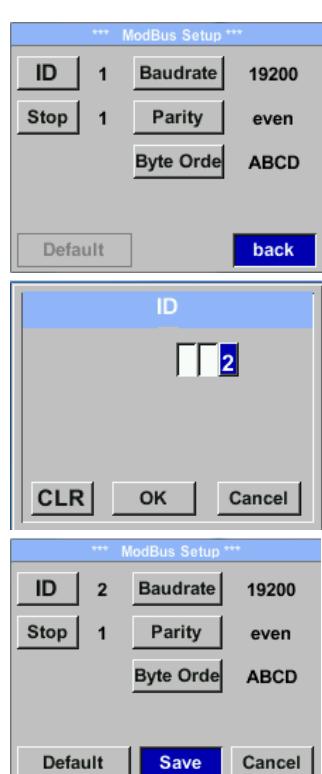

10.3.2.1 Modbus RTU Setup

The Flow sensors VA 520 comes with a Modbus RTU Interface. Before commissioning the sensor the communication parameters

- Modbus ID, Baudrate, Parity und Stop bit

must be set in order to ensure the communication with the Modbus master.

Settings → Modbus Setup

For changes, e.g. the sensor ID, first select by pressing key „ Δ “ the field “ID” and then key “OK”.

Select the desired position by pressing the “>” and select with “OK”.

Change values by pressing the „ Δ “ values takeover by pressing “OK”.

Inputs for baudrate, stopbit and parity is done analogue.

By means of the button “Byte Order” it is possible to change the data format (Word Order). Possible formats are “ABCD” (Little Endian) and “CDAB” (Middle Endian)

Saving the changes by pressing “Save”, therefore select it with key „ Δ “ and then confirm it with “OK”.

Default values out of factory: Modbus ID:

1

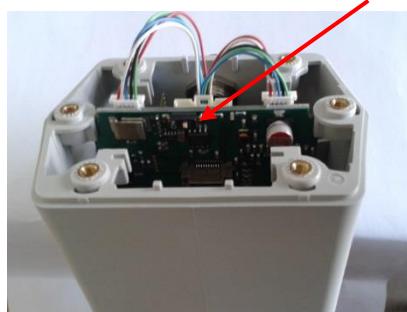

Baud rate: 19200

Stopbit: 1

Parity: even

Byte Order: ABCD

Remark: If the sensor is placed at the end of the Modbus system a termination is required. The sensors have an internal switchable termination, therefore the 6 fastening screws from the lid are to be released and set the internal DIP Switch to “On”.

Alternatively, a 120R resistor can be installed in the plug between pin 2 and pin 4.

It must be ensured that the connection plugs are still plugged and the gasket is installed correctly, see also chapter 4.5.

10.3.2.2 Modbus TCP (Optional)

The Flow sensors VA 520 comes optional with a Modbus TCP Interface (HW Interface:M12 x 1 X-coded connector).

Device supports with this option the Modbus TCP protocol for communication with SCADA systems. TCP port is set to 502 by default. Port can be changed at the sensor or using PC Service Software

Modbus device address (Unit Identifier) can be set in the range of 1- 255.

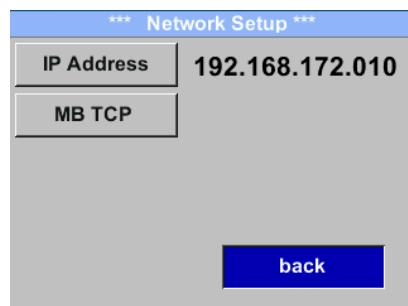

Specification and description of the Modbus protocol is free to download on: www.modbus.org.

Supported Modbus commands (functions):

Command	Code	Description
Function Code	3	(Read holding register)
Function code	16	(Write multiple registers)

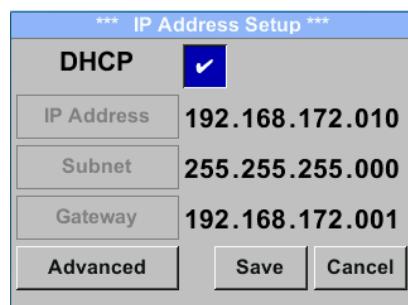

For more details, please see **VA 5xx Modbus RTU_TCP Installation V1.04**

Settings → Network Setup

10.3.2.2.1 Network Setup DHCP

Settings → Network Setup Settings → IP Address

Here you can set up and made a connection, with or without **DHCP**, to a computer.

Remark:

With activated **DHCP** the automatic integration of the sensor in an existing network is possible, without a manual configuration.

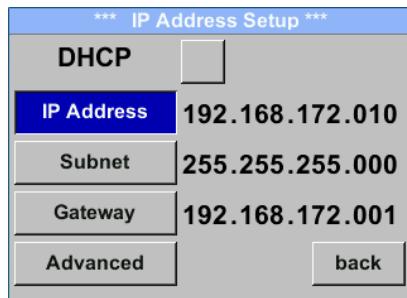

Storing of settings by pressing **“Save”**

10.3.2.2.2 Network Settings static IP

Settings → Network Setup Settings → IP Address → IP Address

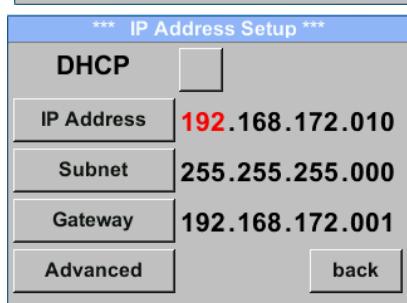

Settings → Network Setup Settings → IP Address → Sub Netz

Settings → Network Setup Settings → IP Address → Gateway

*** IP Address Setup ***	
DHCP	<input type="checkbox"/>
IP Address	192.168.172.010
Subnet	255.255.255.000
Gateway	192.168.172.001
Advanced	<input type="button" value="back"/>

For manual (static) IP, the "IP Address", "Subnet" and "Gateway" selection keys must be selected and activated with "OK".

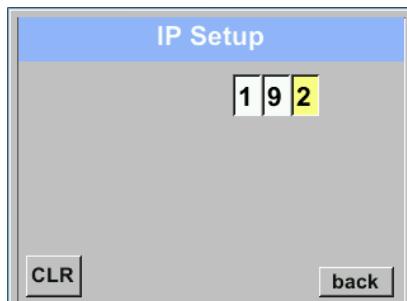

*** IP Address Setup ***	
DHCP	<input type="checkbox"/>
IP Address	192.168.172.010
Subnet	255.255.255.000
Gateway	192.168.172.001
Advanced	<input type="button" value="back"/>

The first data field of the selection, in this case the IP address, is then marked (red).

Confirm with "OK" the corresponding input menu is opened.

By means of ">", the next data field is changed.

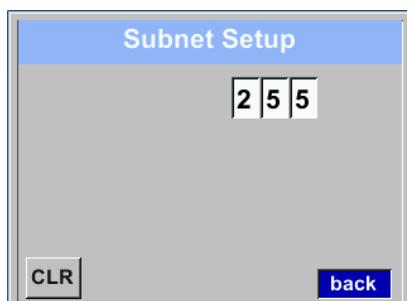

IP Setup	
1 9 2	
<input type="button" value="CLR"/>	<input type="button" value="back"/>

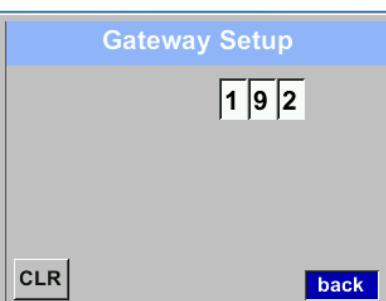

Select the desired position with the ">" key and activate it with the "OK" key.

Change the values with the ">" key, and accept the values with the "OK" key.

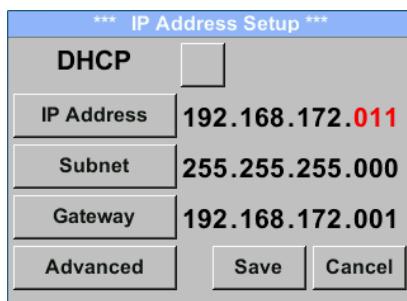

Procedure for "Subnet" and "Gateway" is analogous.

Subnet Setup	
2 5 5	
<input type="button" value="CLR"/>	<input type="button" value="back"/>

Gateway Setup	
1 9 2	
<input type="button" value="CLR"/>	<input type="button" value="back"/>

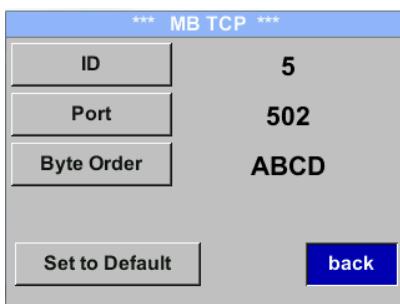

*** IP Address Setup ***	
DHCP	<input type="checkbox"/>
IP Address	192.168.172.011
Subnet	255.255.255.000
Gateway	192.168.172.001
Advanced	<input type="button" value="Save"/> <input type="button" value="Cancel"/>

Store the settings by „Save“

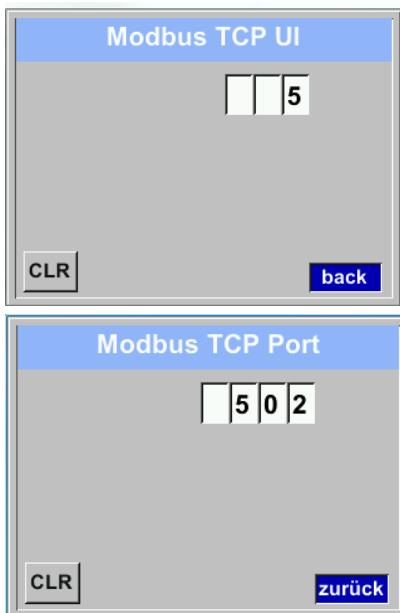

10.3.2.2.3 Modbus TCP Settings

Settings → Network Setup Settings → IP Address → MB TCP

Settings → Network Setup Settings → IP Address → ID

Settings → Network Setup Settings → IP Address → Port

For changes, e.g. the sensor ID, first select by pressing key „>“ the field “ID” and then key “OK”.

Select the desired position by pressing the “>“ and select with “OK” button.

Change values by pressing the „>“ values takeover by pressing “OK”.

Input for the port is done analogue.

By means of the button “Byte Format” it is possible to change the data format (Word Order). Possible formats are “ABCD” (Little Endian) and “CDAB” (Middle Endian)

Saving the changes by pressing “Save”, therefore select it with key „>“ and then confirm it with “OK”.

Reset to the default settings by activating “Set to Default”-

10.3.2.3 Modbus Settings register (2001...2005)

Modbus Register	Register Address	No.of Byte	Data Type	Description	Default Setting	Read Write	Unit /Comment
2001	2000	2	UInt16	Modbus ID	1	R/W	Modbus ID 1...247
2002	2001	2	UInt16	Baudrate	4	R/W	0 = 1200 1 = 2400 2 = 4800 3 = 9600 4 = 19200 5 = 38400
2003	2002	2	UInt16	Parity	1	R/W	0 = none 1 = even 2 = odd
2004	2003	2	UInt16	Number of Stopbits		R/W	0 = 1 Stop Bit 1 = 2 Stop Bit
2005	2004	2	UInt16	Word Order	0xABCD	R/W	0xABCD = Big Endian 0xCDAB = Middle Endian

10.3.2.4 Modbus Values Register (1001 ...1500)

Modbus Register	Register Adresse	No.of Byte	Daten Typ	Beschreibung	Default	Read Write	
1101 10101	1100 10100	4	Float	Flow in m³/h		R	Richtung Grün Richtung Blau
1109 10109	1108 10108	4	Float	Flow in Nm³/h		R	Richtung Grün Richtung Blau

1299 10299	1298 10298	4	UInt32	Consumption Ncf before comma	x	R	Richtung Grün Richtung Blau
1305 10305	1304 10304	4	UInt32	Consumption kg before comma	x	R	Richtung Grün Richtung Blau
1311 10311	1310 10310	4	UInt32	Consumption kWh before comma	x	R	Richtung Grün Richtung Blau
1347 10347	1346 10346	4	Float	Velocity m/s			Richtung Grün Richtung Blau
1355 10355	1354 10354	4	Float	Velocity Nm/s			Richtung Grün Richtung Blau
1363 10363	1362 10362	4	Float	Velocity Ft/min			Richtung Grün Richtung Blau
1371 10371	1370 10379	4	Float	Velocity NFt/min			Richtung Grün Richtung Blau
1419 10419	1418 10418	4	Float	GasTemp °C			Richtung Grün Richtung Blau
1427 10427	1426 10426	4	Float	GasTemp °F			Richtung Grün Richtung Blau

Remark:

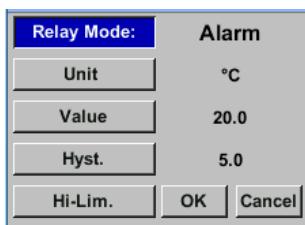

For DS400 / DS 500 / Handheld devices - Modbus Sensor Datatype

„Data Type R4-32“ match with „Data Type Float“

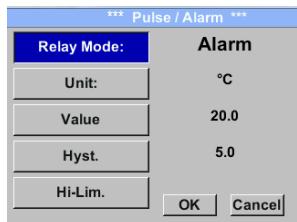

For more additional Modbus values please refer to VA5xx_Modbus_RTU_Slave_Installation_1.05_EN.doc

10.3.3 Pulse /Alarm

Setup → Sensor Setup → Pulse/ Alarm

The galvanically isolated output can be defined as pulse- or alarm output. Selection of field „Relay Mode“ with key „ Δ “ and change modus by pressing key „OK“.

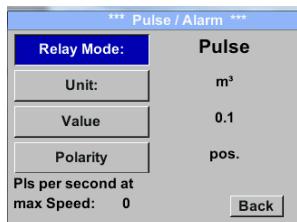

For alarm output following units could be chosen: kg/min, cfm, ltr/s, m³/h, m/s, °F, °C and kg/s.

„Value“ defines the Alarm value, „Hyst.“ defines the desired hysteresis and with „Hi-Lim“ or. „Lo-Lim“ the alarm settings when the alarm is activated

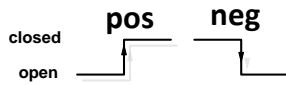

Hi-Lim: Value over limit

Lo-Lim: Value under limit

For the pulse output following units could be chosen: kg, cf, ltr and m³. The pulse value definition to be done in menu „Value“. Lowest value is depending on max. flow of sensor and the max frequency of pulse output of 50Hz.

With „Polarity“ the switching state could be defined. Pos. = 0 → 1 neg. 1 → 0

10.3.3.1 Pulse output

The maximum frequency for pulse output is 50 pulses per second (50Hz). The Pulse output is delayed by 1 second.

Pulse value	[m ³ /h]	[m ³ /min]	[l/min]
0.1 ltr / Pulse	18	0,3	300
1ltr / Pulse	180	3	3000
0.1m ³ / Pulse	18000	300	300000
1 m ³ / Pulse	180000	3000	3000000

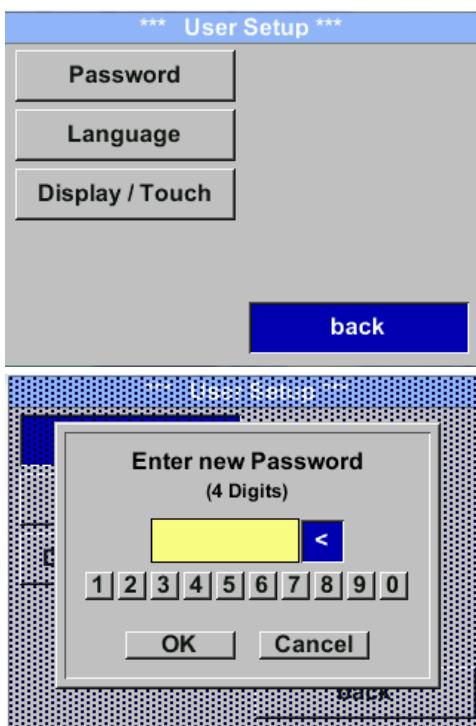

Table 1 Maximum flow for pulse output

Entering pulse values that are not allow a presentation to the full scale value, are not allowed. Entries are discarded and error message displayed.

10.3.4 User Setup

10.3.4.1 Password

Settings → UserSetup → Password

To make changes, first select a menu with button „ Δ “ and confirm selection by pressing „OK“.

It is possible to define a password. The required password length is 4 digits. Please select with button „ Δ “ a figure and confirm it with „OK“ .Repeat this 4 times.

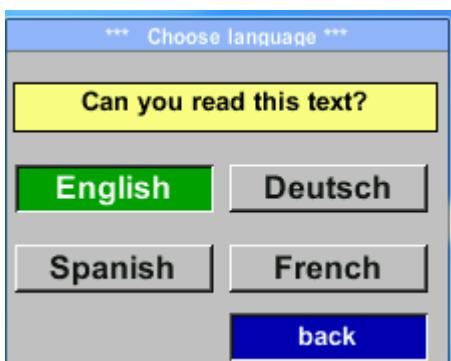

With „ Δ “ the last figure could be deleted. Password input have to be inserted twice.

Confirmation of input/password by pressing „OK“.

Factory settings for password at the time of delivery: 0000 (4 times zero).

10.3.4.2 Language

Settings → UserSetup → Language

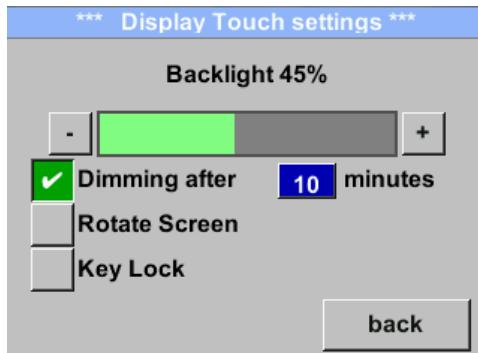

Currently 4 languages have been implemented and could be selected with button „ Δ “

Change of language by confirming with “OK”. Leaving the menu with button “back”.

10.3.4.3 Display / Touch

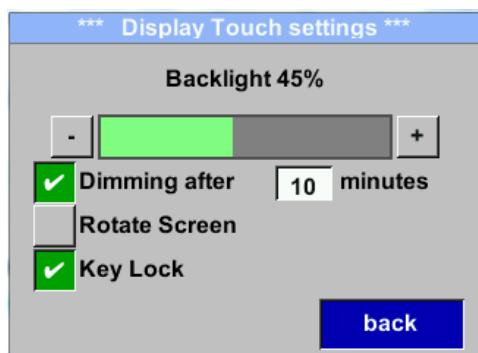

Settings → UserSetup → Display / Touch

With the button „-“ and with button „+“ it is possible to adjust the backlight / display brightness. The actual / adjusted backlight brightness is showed in the graph „**Backlight**.“

By activation „**Dimming after**“ and entering a time a display dimming could be set.

With „**Rotate Screen**“ the display information could be rotated by 180°.

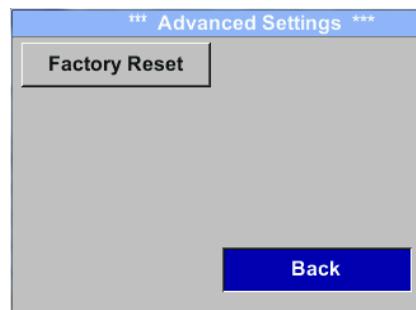

By activation of „**Key Lock**“ the operation of the sensor locked.

Unlocking the keyboard is only possible by restarting the sensor and calling the operating menu within the first 10s. To do this, use the „**OK**“ button to enter the operating menu during this period

10.3.5 Advanced

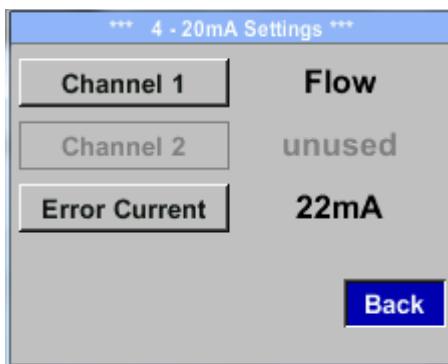

Settings → Advanced

By pressing „**Factory Reset**“ the sensor is set back to the factory settings.

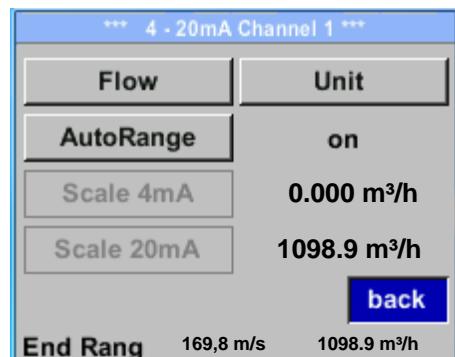

10.3.6 4 -20mA

Settings → 4-20mA

To make changes, first select a menu with button „**△**“ and confirm selection by pressing „**OK**“.

Settings → 4-20mA → Channel 1

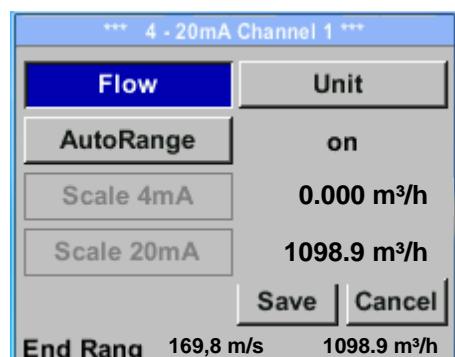

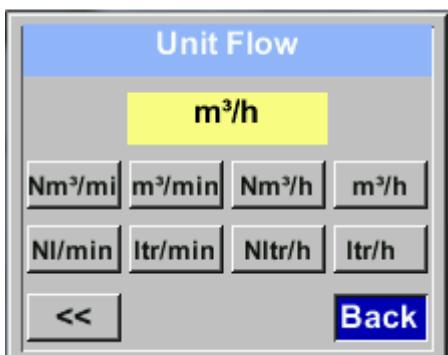

The 4-20 mA Analogue output of the Sensor VA 520 can be individually adjusted.

It is possible to assign following values „**Temperature**“, „**Velocity**“ und „**Flow**“ to the channel CH 1.

To make changes, first select the value item with button „**△**“ and confirm. Moving between the different measurements values or to deactivate the 4-20mA with setting to „**unused**“ by pressing „**OK**“.

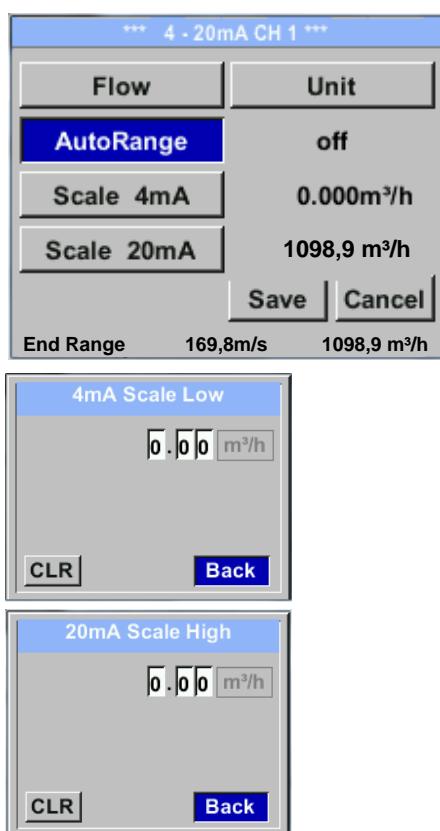

To the selected measurement value a corresponding / appropriate unit needs to be defined. Select „**Unit**“ with „**△**“ and open menu with „**OK**“. Select required unit with „**△**“ and take over by pressing „**OK**“.

Here e.g. for the measurement value Flow, procedure for the other measurements values is analog.

For saving the changes done press button „**Save**“ to discard the changes press button „**Cancel**“.

Leaving the menu with „**Back**“.

Settings → 4-20mA → Channel 1 → AutoRange

The scaling of the 4-20mA channel can be done automatically "Auto Range = on" or manual "AutoRange = off".

With button „ Δ “ select the menu item „AutoRange“ select with „OK“ the desired scaling method. (Automatically or manually)

In case of **AutoRange = off** with „**Scale 4mA**“ und „**Scale 20mA**“ the scale ranges needs to be defined.

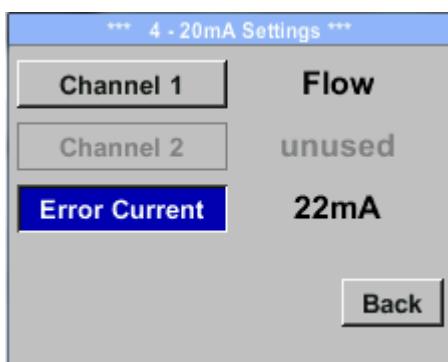

Select with button „ Δ “ the item „Scale 4mA“ or „Scale 20mA“ and confirm with „OK“.

Input of the scaling values will be analogous as described before for value settings.

Using „**CLR**“ clears up the complete settings at once.

For „**Auto on**“, the max. scaling is calculated based on the inner tube diameter, max. measurement range and the reference conditions settings.

Take over of the inputs with „**Save**“ and leaveing the menu with „**Back**“.

Settings → 4-20mA → Error Current

This determines what is output in case of an error at the analog output.

- 2 mA Sensor error / System error
- 22 mA Sensor error / System error
- None Output according Namur (3.8mA – 20.5 mA)
<4mA to 3.8 mA Measuring range under range
>20mA to 20.5 mA Measuring range exceeding

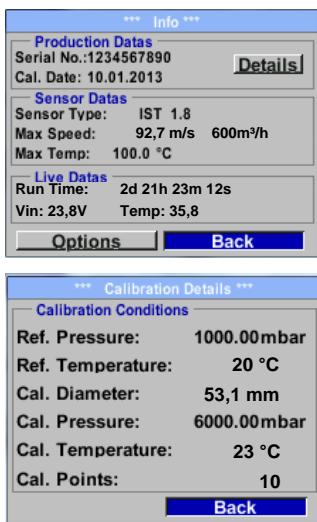

To make changes first select a menu item "Current Error" with button „ Δ “ and then select by pressing the „OK“ the desired mode

For saving the changes done press button „**Save**“ to discard the changes press button „**Cancel**“.

Leaving the menu with „**Back**“.

10.3.7 VA 520 Info

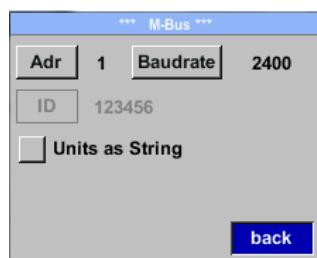

Settings → Info

Here you get a brief description of the sensor data incl. the calibration data.

Under **Details**, you are able to see in addition the calibration conditions.

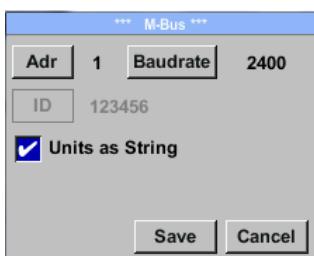

10.4 MBus

The Sensor offers two possibilities for coding the Value Information Field (VIF).

- Primary VIF (The units and multiplier correspond to MBus specification 4.8 chapter 8.4.3)
- Plain text VIF ((units are transmitted as ASCII characters. So units that are not included in MBus specification chapter 8.4.3 are possible)

Switch to Plain Text VIF by activation of „**Units as String**“.

10.4.1 Default Settings communication

Primary Address*:	1
ID:	Serialnumber of Sensor
Baud rate*:	2400
Medium*:	depending on medium (Gas or Compressed Air)
Manufacturer ID:	CSI
VIF coding:	Primary VIF

Both addresses, Primary address and ID, could be automatically searched in the M-Bus system.

10.4.2 Default values transmitted

Value 1 with [Unit]*:	Consumption [m ³]
Value 2 with [Unit]*:	Flow [m ³ /h] Consumption [m ³]
Value 3 with [Unit]*:	Gas temperature [°C]

*All Values could be changed / preset in production or with CS Service software (Order-No. 0554 2007)

11 Status / Error messages

11.1 Status messages

- **CAL**

On the part of CS Instruments GmbH & Co.KG a regular re-calibration is recommended, see chapter 13.

At delivery, the date at which the next recalibration is recommended is internally entered.

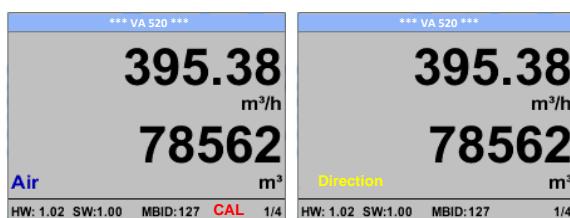

When this date is reached, a message appears in the display with the status message „**CAL**“.

Note: The measurement will continue without interruption or restriction.

- **Direction**

When used in conjunction with a direction switch VA409, the status message "Direction" is displayed in case of opposite flow direction and no measurement may take place.

Status messages:

11.2 Error messages

- **Low Voltage**

If the supply voltage is less than 11V, the warning message „**Low Voltage**“ is displayed.

This means that the sensor can no longer work / measure correctly and thus there are none measured values for flow, consumption and speed are available.

- **Heater Error**

The error message „**Heater Error**“ occurs in case of failure of the heating sensor.

- **Internal Error**

In the case of this message „**Internal Error**“, the sensor has an internal read error on e.g. EEPROM, AD converter etc. detected.

- **Temp out of Range**

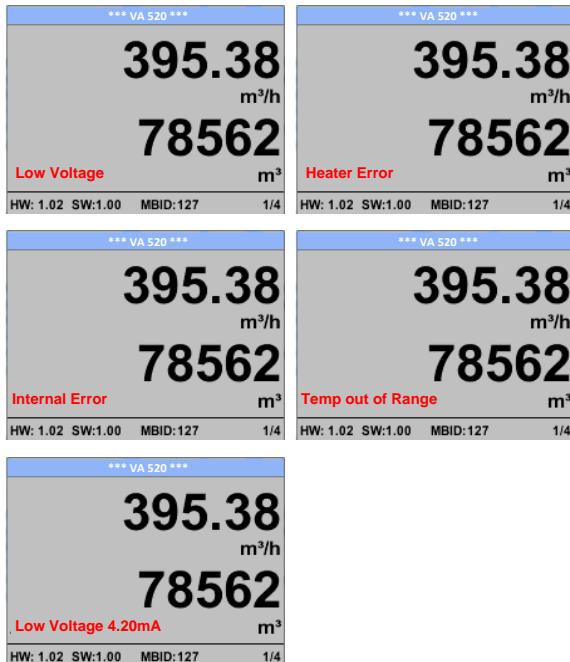

At media temperatures outside the specified temperature range, the status message „**Temp out of Range**“ occurs.

This temperature overshoot leads to incorrect measurement values (outside the sensor specification).

- **Low Voltage 4-20mA**

For sensors with a galvanically isolated 4-20mA output, a min. Supply voltage of 17.5V is required. If this value is undershot, the error message „**Low Voltage 4-20mA**“ is displayed.

Error messages:

12 Maintenance

The sensor head should be checked regularly for dirt and cleaned if necessary. Should dirt, dust or oil accumulate on the sensor element, a deviation will occur in the measuring value. An annual check is recommended. Should the compressed air be heavily soiled this interval must be shortened.

13 Cleaning of the sensor head

The sensor head can be cleaned by carefully moving it in warm water with a small amount of washing-up liquid. Avoid physical intervention on the sensor (e.g. using a sponge or brush). If soiling cannot be removed, service and maintenance must be carried out by the manufacturer.

14 Re-Calibration

If no customer specifications are given then we recommend to carry out calibration every 12 months. For this purpose the sensor must be sent to the manufacturer.

15 Spare parts and repair

For reasons of measuring accuracy spare parts are not available. If parts are faulty, they must be sent to the supplier for repair.

If the measuring device is used in important company installations, we recommend keeping a spare measuring system ready.

16 Calibration

According to DIN ISO certification of the measuring instruments we recommend to calibrate and if applicable to adjust the instruments regularly from the manufacturer. The calibration intervals should comply with your internal specification. According to DIN ISO we recommend a calibration interval of one year for the instrument VA 520.

On request and additional payment, calibration-certificates could be issued. The precision is given due to use DKD-certified flow meters and verifiable

17 Warranty

If you have reason for complaint we will of course repair any faults free of charge if it can be proven that they are manufacturing faults. The fault should be reported immediately after it has been found and within the warranty time guaranteed by us. Excluded from this warranty is damage caused by improper use and non-adherence to the instruction manual.

The warranty is also cancelled once the instrument has been opened - as far as this has not been mentioned in the instruction manual for maintenance purposes - or if the serial number in the instrument has been changed, damaged or removed.

The warranty time for the VA 520 is 12 months. If no other definitions are given the accessory parts have a warranty time of 6 months. Warranty services do not extend the warranty time.

If in addition to the warranty service necessary repairs, adjustments or similar are carried out the warranty services are free of charge but there is a charge for other services such as transport and packaging costs. Other claims, especially those for damage occurring outside the instrument, are not included unless responsibility is legally binding.

After sales service after the warranty time has elapsed

We are of course there for you even after the warranty time has elapsed. In case of malfunctions, please send us the instrument with a short-form description of the fault. Please do not forget to indicate your telephone number so that we can call you in case of any questions.

KONFORMITÄTSERKLÄRUNG
